PROFESSIONAL SUMMARY

Backend developer with 3+ years building and running production Node.js, NestJS and TypeScript systems. Own 300+ REST endpoints across 4 microservices serving 30K+ users at 99.9% uptime. Cut API latency 85% and moved 80% of server load onto a separate media service. Lead 3 backend engineers, with end-to-end ownership of payments, authentication and live data migrations.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Node.js, NestJS, Express.js

APIs & Real-Time: REST APIs, WebSockets, Socket.io, Webhooks, Third-Party API Integration

Databases & Search: MongoDB (Geospatial, Aggregation, bulkWrite), PostgreSQL, Redis, Elasticsearch, Firebase

Queues & Async: BullMQ, RabbitMQ, Agenda.js, Event-Driven Architecture, Background Jobs

Cloud & DevOps: AWS (EC2, S3, Lambda, SES, ALB, Auto Scaling, Route 53), Docker, CI/CD, Git, PM2

Security & Auth: JWT, SSO, 2FA/TOTP, CASL (RBAC), HMAC

Media, AI & Integrations: FFmpeg, Sharp, HLS Streaming, OpenAI API, LangChain, Deepgram, SendGrid, Stripe, Hive Moderation

Architecture: Microservices, Modular Monolith, CQRS, API Gateway, Caching, Performance Optimization

PROFESSIONAL EXPERIENCE

Software Development Engineer II | Ink In Caps | Mumbai, India | August 2023 – Present

Promoted from Software Development Engineer I in August 2025. Product engineering services company.

Core Backend Services — Content Creator Platform

- Built and maintained **300+ REST API endpoints across 4 production microservices** serving 30K+ registered users and 800–1,000 concurrent users at peak, holding 99.9% uptime.
- Cut API latency **85%, from 8s to ~1.5s**, using async processing, MongoDB query optimization and Redis caching on high-traffic endpoints.
- Designed a MongoDB geospatial search returning results in **under 200ms across 10K+ locations**, powering real-time matchmaking and a 7–8% conversion uplift.
- Implemented authentication and access control with SSO, 2FA/TOTP and CASL RBAC, covering **50+ permission rules across 30K+ accounts**.
- Moved uploads to a direct-to-S3 pipeline with presigned URLs and multipart transfers handling **5K+ uploads per day**, and migrated a legacy JavaScript monolith to modular NestJS.
- Ran **150+ live data migrations with zero data loss** using MongoDB bulkWrite and cursor-based iteration on production datasets.

Media Processing Microservice

- Split media processing into its own service, **taking 80% of the load off the core server** and handling 5K+ files per day across images, HLS video and audio.
- Wired the async job pipeline on BullMQ and S3 with concurrency limits and retries, serving **adaptive-bitrate HLS streams** behind signed-token access control.

Payments, Notifications and AI Services

- Integrated Stripe for a gaming and e-commerce platform built for enterprise client Hungama, handling **600+ monthly transactions and ₹8L+ GMV at 98% success**, plus Centrobill and Skrill with chargeback sync and SEPA/IBAN migration.
- Made payment webhooks **idempotent with terminal-state guards** to stop duplicate fulfilment of cancelled orders, and wrote MongoDB aggregation pipelines to reconcile agency payouts.
- Reduced monthly email volume **90%, from 144,800 to 14,600**, with a Redis-backed 6-tier notification pipeline using BullMQ digest scheduling on SendGrid.
- Built AI analysis backends on OpenAI, LangChain and Deepgram with **sub-second Elasticsearch search**, moving LLM work onto BullMQ workers.

Technical Leadership

- Lead 3 backend engineers** in a 12-person team, owning work allocation, code review and onboarding; added a mandatory PR-verification gate before any merge to development or production.
- Ran the full platform solo for **2–3 months** — 4 microservices, AWS infrastructure, feature delivery and production support — then onboarded and trained the incoming backend team.

Operations Officer | RDC Concrete India Pvt. Ltd. | Mumbai, India | December 2020 – May 2023

- Maintained **100% system uptime** and lowered downtime 50% through monitoring workflows; managed Oracle/DMS procurement tracking across 500+ monthly records.

EDUCATION

Bachelor of Engineering, Mechanical Engineering | Rajiv Gandhi Institute of Technology | August 2016 – November 2020

University of Mumbai, Mumbai, India | CGPA: 8.67/10
